

**PSI
Green Program**

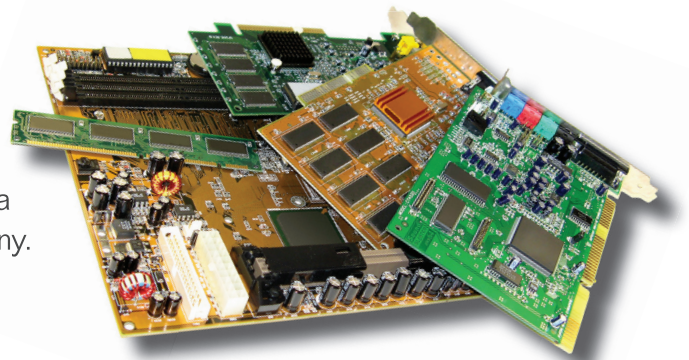

PSI WILL HELP YOU RECYCLE YOUR E-WASTE RESPONSIBLY. LET'S PROTECT OUR ENVIRONMENT AND GO GREEN TOGETHER!

E-waste is the most rapidly growing segment of the municipal solid waste stream. It consists of computers, monitors and electronic equipment, all of which contain some very toxic substances. When disposed of improperly these toxins present risks to our communities and the global ecosystem.

In the U.S., it is estimated that only 11-14% of e-waste is sent to recyclers. It is also estimated that 70-80% of e-waste is exported to countries with developing economies, where it is often disposed of improperly.

Partner with PSI

In the near future, legislation will mandate recycling and fine companies for waste that is not disposed of properly. PSI is working on "getting ahead" of this legislation and has established a partnership with many of our vendors and a local recycling company. You are invited to make a difference and go green with us.

Five reasons to partner with PSI on recycling your e-waste:

- Avoid government penalties
- Stay ahead of legislation
- It's environmentally responsible
- PSI does most of the work
- 'Bragging rights' of a Green Program

The PSI Green Program eliminates the risk of government fines and ensures that the environment is protected by recycling electronic equipment and components. It also helps manage hazardous materials and turns your e-waste into a reusable commodity.

How do we do it? It's Easy.

- 1 If you have unwanted e-waste products at your location that you want to discard, just ship it to us. Write "E-Waste" or "E-Scrap" on the paperwork.

Note: We cannot accept e-waste that has been exposed to hazardous chemicals.

- 2 Allow us to properly dispose of un-repairable or beyond economical repair components. This allows us to decrease the carbon footprint generated by additional shipping.

The benefits of e-waste recycling:

Conserves natural resources. Recycling recovers valuable materials from old electronics that can be used to make new products. As a result, we save energy, reduce pollution, reduce greenhouse gas emissions, and save resources by extracting fewer raw materials from the earth.

Protects your surroundings. Safe recycling of outdated electronics promotes sound management of toxic chemicals, such as lead and mercury.

Saves landfill space. E-waste is a growing waste stream. By recycling these items, landfill space is conserved.
